Tidy Forecasting in R

Rob J Hyndman

ISF 2018

Outline

1 Why change?

2 Example: Australian eating-out expenditure

3 Example: Australian prison population

4 Example: Half-hourly electricity demand

5 Equivalent methods

6 More information

forecast package

Pre 2003	Private functions used for consulting projects
July/August 2003	**ets** and **thetaf** added
August 2006	v1.0 available on CRAN
May 2007	**auto.arima** added
May 2010	**arfima** added
Feb/March 2011	**tslm**, **stlf**, **naive**, **snaive** added
August 2011	v3.0. Box Cox transformations added
December 2011	**tbats** added
April 2012	Package moved to github
November 2012	v4.0. **nnetar** added
June 2013	Major speed-up of **ets**
February 2016	v7.0. Added ggplot2 graphics
February 2017	v8.0. Added **checkresiduals**, **tsCV** and **%>%**
April 2018	v8.3. Added **mstl**
June 2018	$\approx$ 100,000 package downloads per month

fable package

A replacement for the forecast package.

Why change?

- Interacting with tidyverse packages
- Sub-daily data and multiple seasonal data handled more easily
- Consistency of interface
- Distribution forecasting rather than point + interval
- Flexible transformations
- Designed for forecasting many related time series
- Simpler interface for forecast reconciliation

Outline

1 Why change?

2 Example: Australian eating-out expenditure

3 Example: Australian prison population

4 Example: Half-hourly electricity demand

5 Equivalent methods

6 More information

Equivalent methods: forecast $\longrightarrow$ fable

```
auto.arima ⟶ ARIMA
ets        ⟶ ETS
tslm/lm    ⟶ LM
tbats      ⟶ TBATS
nnetar     ⟶ NNETAR
stlm       ⟶ STL %>%
                modelcomponents(
                  ETS(seasadj),SNAIVE(season))
```

- All functions have a formula interface with automatic modelling if no formula provided.
- All functions produce `mable` class objects.
- Some of these functions not yet implemented

Equivalent methods: forecast ⟶ fable

```
naive    ⟶ NAIVE %>% forecast
snaive   ⟶ SNAIVE %>% forecast
thetaf   ⟶ THETA %>% forecast
stlf     ⟶ STL %>%
             modelcomponents(
               ETS(seasadj),SNAIVE(season)) %>%
             forecast
hw       ⟶ HW %>% forecast
holt     ⟶ HOLT %>% forecast
ses      ⟶ SES %>% forecast
splinef  ⟶ SPLINE %>% forecast
croston  ⟶ CROSTON %>% forecast
```

- `forecast` produces `fable` class objects.
